

## **Compassionate Healthcare Legislation vs. Dispassionate Economic Legislation: Who Wins?**

“We are beginning to see the competitive nature of compassionate healthcare legislation and dispassionate economic legislation coming to a head”, commented TAVHealth CEO, Jamo Rubin, M.D. in a recent presentation. Identifying and solving the Social Determinants of Health are at the core of TAVHealth and Jamo Rubin, M.D., articulates the importance of doing so to many healthcare professionals.

The National Academy of Medicine (NAM) Digital Learning Collaborative, co-chaired by Jonathan B. Perlin, M.D., Ph.D., and Reed Tuckson, M.D., recently reached out to Jamo Rubin to request his participation in a panel discussion about the work TAVHealth is doing. The meeting, to be held in Washington D.C., will focus on the data infrastructure for social, public health, and clinical data and resides in TAVHealth’s wheelhouse. Participants will discuss and explore emerging best practices including scale and spread strategies.

TAVHealth has been making inroads in helping healthcare professionals to identify and solve the Social Determinants of Health. With the knowledge that there is much more to health than healthcare, TAVHealth is expanding its collaborative platform to communities and philanthropic organizations with the goal to improve health outcomes for everyone. As the nation swirls in differing perspectives on healthcare – we’re beginning to see the topic of health emerge – not just healthcare.

On Thursday, July 13<sup>th</sup>, Jamo will join the NAM Digital Learning Collaborative of the Leadership Consortium for a Value and Science-Drive Health System. With a focus on improving health outcomes, lowering costs, and providing accessible pathways for care teams to communicate and collaborate, Jamo is sure to provide some thought-provoking points as he joins the esteemed group of healthcare professionals.

The National Academy of Medicine’s Digital Learning Collaborative (DLC), is an ad hoc convening activity created to provide a venue for joint activities that can accelerate progress toward the digital infrastructure necessary for continuous improvement and innovation in health and healthcare. This includes fostering a new culture of collaborative action among participants in the learning process including patients, clinicians, researchers, and product developers.
